

HOW TO PUT ON A SURGICAL MASK WITH LOOPS

- Clean your hands.
- Put your fingers through the earloops.
- The nose clip should be positioned at the top.
- Make sure the mask covers your nose and mouth.

- Position the earloops around the ears.
- Pull the mask from the top and bottom to fully unfold the pleats of the masks. This will provide maximum coverage of the face and minimize the layers you have to breathe through.
- Place the mask on your face.

- Once the mask is positioned properly, press the nosepiece until it fits securely over the bridge of your nose and you've made a good seal between the mask and your nose. Make sure the mask fits properly on your face.
- A good seal will reduce the amount of air that escapes from the top, bottom, or sides of the mask.

- Avoid touching mask while worn.
- Do not allow mask to dangle around the neck.

- Change as directed.
- Use only once and change if wet (masks become ineffective when wet).

How to remove the mask with loops

- Touch only the loops of the mask when removing and disposing the mask.
- Hold both of the earloops and gently lift and remove the mask.
- Dispose into trash can.
- Clean your hands.
